

We are proud to offer a NEW diabetic screening test performed by scanning the natural crystalline lens inside of your eye: the ClearPath DS-120. **The test can detect elevated levels of glucose in the eye on an average of 7 years before you experience symptoms of diabetes.** Some advantages of the test include:

- No blood or needles required
- Quick: each scan takes approximately 6 seconds
- Painless
- Immediate results: there is no waiting for days for your results as with typical blood work
- Earlier diagnosis: up to 7 years sooner than typical diabetes symptoms show up, which leads to earlier intervention/treatment
- Inexpensive: only costs \$20

There are over 100 million people in the U.S. that have diabetes or pre-diabetes, with an estimated 50% of the population undiagnosed. In the US alone, it is estimated that **every 24 hours** there are:

- 5,082 new cases of diabetes
- 238 lower extremity amputations (i.e. toes, feet, legs)
- 120 new cases of end-stage renal disease
- 48 new cases of blindness

Who should have these tests performed?

- Anyone already diagnosed with diabetes: helps monitor your control of diabetes
- Anyone with a family history of diabetes
- Anyone with any of the following symptoms: increased thirst, more frequent urination, weakness, fatigue, slowed healing, or vision fluctuations
- Anyone considered overweight as determined by your medical doctor

The test is \$20.00 and is currently NOT covered by any insurance carriers. IT is recommended for people between the ages of 20 and 70 years old.

Please, check the bottom of the history form whether or not you want to have this new, innovative, diabetic screening test performed. THANK YOU!
